

Big Dig Data Advances Information Security Through ISO 27001 and SOC 2 Project

June 2, 2026

At BIG DIG DATA, we continuously invest in improving the security, reliability, and governance of our services.

To support these efforts, we are implementing a project focused on establishing and formalizing processes required for ISO 27001 and SOC 2 certification. The project is supported through consultancy services for SMEs and is co-funded by the European Union.

Co-funded by the European Union

Project name: Implementation of Processes Required for ISO 27001 and SOC 2 Certification

Main objective: To implement and formalize processes required for ISO 27001 and SOC 2 certification, strengthening information security, governance, and compliance across the organization.

Project description: The project supports the purchase of consultancy services for SMEs aimed at implementing processes required by ISO 27001 and SOC 2 certification frameworks.

Expected Results

The project supports the implementation of internationally recognized information security and compliance practices through specialized consultancy services.

As a result of the project, BIG DIG DATA will:

- Implement and formalize information security and compliance processes
- Strengthen governance and risk management practices
- Improve internal controls and documentation
- Obtain ISO 27001 certification
- Obtain SOC 2 certification
- Further enhance trust, transparency, and security for BIG DIG DATA customers
